Mold machined in sections!

Machined HDU to be used as models for a concrete wall block system.

2011: Holding Steady!

## Thank you for your referrals

Through out our 9 year history we have enjoyed referrals from our existing customers and vendors. We want everyone to know that we attribute a lot of our business growth over the years to this, and we appreciate it very much! ! !

As we continue "Holding Steady" in 2011, or even increasing during these economically challenging times, we find great joy and pleasure in knowing that our customers and vendors have confidence in our company to refer others to us.

To show our appreciation for your referrals, Don & Heike are working out details for a New Customer Referral Program. Look for details of this new program in our next newsletter and on Facebook.

# Material Spotlight

# N

A cast nylon with built-in oil lubrication, NYLOIL provides superior machinability, performance, and durability compared to other plastic and traditional bearing materials.

# Y

During NYLOIL's manufacturing process, an oil lubricant package is completely dispersed within the cast nylon matrix, making it an integral part of the casting's structure.

Although not evident by sight or touch, the oil lubricant in NYLOIL is always at the surface regardless of the amount of material removed during finish machining or normal wear.

# L

NYLOIL is two times less likely to break under load impact than a regular cast nylon.

## Typical Applications:

Gears

Wear Pads

Tooling Fixtures

Conveyor Wheels

Die Wear Plates

Valve Seats

Bearings

Pulleys

Cams

Scraper Blades

Supports

Wear Rings

Bushings

Guides

Wear Rails

Wear Strips

Form Tools

Seals
